

# TVA Installation Manual

## ● INSTALLATION

Open the **TVA-shield-monochromatic** folder with your file explorer, press right-click and selecting Open in Terminal. Or navigate to the folder from the terminal with this command.

```
cd /PATH/TO/TVA-shield-monochromatic
```

1. Make the **installer** file executable, to do this, press Ctrl + I or press right-click and select properties, then go to the permissions tab and activate the option "Allow the file to be run as a program", or open the folder in terminal and run this command.

```
sudo chmod +x installer
```

2. Execute the **installer** file, you can do it with this command

```
sudo ./installer
```

## ● TESTING

1. After installation, open **TVA-shield-monochromatic** folder and make the **show-splash.sh** file executable the same way you did the **installer** file.
2. Open the **TVA-shield-monochromatic** in terminal and run this command.

```
sudo ./show-splash.sh
```

## ● UNINSTALLATION

1. Open **TVA-shield-monochromatic** folder and make the **uninstaller** file executable the same way you did the **installer** file.
2. Open the **TVA-shield-monochromatic** in terminal and run this command.

```
sudo ./uninstall
```

# CUSTOMIZATION

Customization must be done before installation, otherwise you will need to reinstall the theme to apply the changes.

To reinstall the theme, just execute the installer file again.
