TVA Installation Manual

● INSTALLATION

1. Open the **TVA-Monochromatic** folder with your file explorer, press <u>right click</u> and selecting <u>Open in Terminal</u>. Or navigate to the folder from the terminal with this command.

`cd /PATH/TO/TVA-Monochromatic`

1. You must give execute permission to the installer file, to do this select the file and press <u>Ctrl + I</u>, or <u>right click</u> on the file and select <u>properties</u>. Next, go to the <u>permissions tab</u> and activate the "<u>Allow file to run as a program</u>" option. Or you can open the folder in a terminal and run this command.

`sudo chmod +x installer`

2. Execute the **<u>installer</u>** file, you can do this by opening the folder in terminal and running the file as root.

`sudo ./installer`

● TESTING

1. To check if the theme has been installed correctly, you need to open the **TVA-Monochromatic** folder and give execute permissions to the **<u>demo.sh</u>** file.

2. Open the **TVA-Monochromatic** in terminal and run the file as root.

`sudo ./demo.sh`

● UNINSTALLATION

1. Open **TVA-Monochromatic** folder and give execute permissions to the **<u>uninstaller</u>** file.

2. Open the **TVA-Monochromatic** in terminal and run the file as root.

`sudo ./uninstaller`

CUSTOMIZATION

Customization must be done <u>before installation</u>, otherwise you will need to reinstall the theme to apply the changes.
To reinstall the theme, just execute the **installer** file again.

● CUSTOMIZING BACKGROUND COLOR

1. Open the file called `background.png` located inside the **TVA-Seal** folder in your image editor.

2. Change the image mode from indexed to RGB, and change the image color.

3. Once finished, return the image to indexed mode and save the changes ensuring to <u>NOT change neither the file name</u> `background.png` neither his parent folder (**TVA-Seal**).

● CUSTOMIZING LOADING BAR COLOR

1. Open the file called `barpix.png` located inside the **TVA-Seal** folder in your image editor.

2. Change the image mode from indexed to RGB, and change the image color.

3. Once finished, return the image to indexed mode and save the changes ensuring to <u>NOT change neither the file name</u> `barpix.png` neither his parent folder (**TVA-Seal**).

● CUSTOMIZING BACKGROUND IMAGE

1. Rename, remove or move to a different folder the file called `background.png` located inside the **TVA-Seal** folder.

2. Put your custom background image <u>IN PNG FORMAT</u> inside the **TVA-Seal** folder and rename this as `background.png`

● CUSTOMIZING SEAL COLOR

1. Open the file called `TVA-Seal.png` located inside the **TVA-Seal** folder in your image editor.

2. Colorize the TVA seal with the color you want.

3. Once finished, save the changes ensuring to <u>NOT change neither the file name</u> `TVA-Seal.png` neither his parent folder (**TVA-Seal**).
